Subject: [name], looking for a simple treatment regimen?

HARVONI
ledipasvir/sofosbuvir
90 mg/400 mg tablets

HARVONI is the one and only treatment that’s been proven to **cure** chronic hepatitis C (genotype 1) with **one pill, once a day**.

Leading the way in Hep C treatment.

In the past, you or a loved one may have heard about or experienced challenging treatment regimens for hepatitis C (Hep C) that may have included multiple separate medicines and complicated dosing.

Today, there’s HARVONI, a prescription medicine containing ledipasvir and sofosbuvir, that is used to treat chronic (lasting a long time) Hep C genotype 1 infection in adults. It is not known if HARVONI is safe and effective in children under 18 years of age.

HARVONI treatment is one pill, once a day. It’s that simple.

That means your schedule doesn’t have to revolve around added medications or injections. And you don’t have to keep track of multiple pills wherever you go.

Important Safety Information

What should I tell my healthcare provider before taking HARVONI?

- If you have: liver problems other than hepatitis C infection; severe kidney problems or are on dialysis; any other medical condition; or if you are pregnant or breastfeeding or plan to become pregnant or breastfeed. It is not known if HARVONI will harm your unborn baby or pass into your breast milk.
- If you take amiodarone (Cordarone®, Nexterone®, Pacerone®), rifampin (Rifadin®, Rifamate®, Rifater®), St. John’s wort or a product that contains St. John’s wort. Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. HARVONI may affect the way other medicines work, and other medicines may affect how HARVONI works.

You should not take HARVONI if you also take other medicines that contain sofosbuvir (SOVALDI®).

What are the most common side effects of HARVONI?

Common side effects include tiredness and headache.

HARVONI has been proven to cure 96–99% of patients who’ve had **no prior** Hep C treatment with 12 weeks of therapy.* Cure means the Hep C virus can **no longer be detected** in your blood when measured three months after you’ve finished your treatment.

With HARVONI, there’s **no interferon or ribavirin**. The most common side effects include **tiredness** and **headache**.

*In a study of 865 patients with genotype 1 Hep C and no prior Hep C treatment, with or without advanced liver disease (cirrhosis), 99% (210 out of 213) of those who received HARVONI once daily for 12 weeks were cured. In a separate study of 647 patients with genotype 1 Hep C, with no prior Hep C treatment and without cirrhosis, 96% (208 out of 216) of those who received HARVONI once daily for 12 weeks were cured.

Talk to your Hep C specialist to see if the **HARVONI cure** is right for you.
