Subject: [First name], keep working toward your goals.

Every day, you're closer to learning if you're cured*

You've already come a long way

As you move toward the completion of your HARVONI therapy, it's important to reflect on how far you've come. It's also important to stay focused on the goals you set when you and your hepatitis C (Hep C) specialist started to work toward putting Hep C behind you. Day by day, you may want to take some time for yourself or call someone you trust to discuss all the reasons you decided to begin treatment. Also remember, you can always reach out to your Hep C specialist any time you have questions.

*Cure means the Hep C virus is not detected in the blood when measured three months after treatment is completed.

What does the idea of a cure mean to you?

In clinical studies, **96–99%** of adult patients who've had **no prior Hep C treatment** were cured with just **12 weeks** of therapy.[†] As you think about your goals and motivation for treatment, you may find it helpful to know how other people have described their feelings about Hep C and what being cured means to them.

- *"I wanted to get better. I wanted to be cured of this horrible disease."*
Joe, PA
- *"From my perspective and experience, the Gilead drug was a breakthrough."*
Jon, CA
- *"Hepatitis C is not hanging over my head anymore. It's really an awesome feeling."*
Charlotte, TN

[†]In a study of 865 patients with genotype 1 Hep C and no prior Hep C treatment, with or without advanced liver disease (cirrhosis), 99% (210 out of 213) of those who received HARVONI once daily for 12 weeks were cured. In a separate study of 647 patients with genotype 1 Hep C, with no prior Hep C treatment and without cirrhosis, 96% (208 out of 216) of those who received HARVONI once daily for 12 weeks were cured.

We're here to help you reach your treatment goals

Remember, we are here if you need us. With [HARVONI Support Path®](#), you can call **1-855-7-MYPATH** (1-855-769-7284) to talk to a nurse 24/7 about any questions you have about HARVONI. You can also get tips and tools that help you easily monitor your progress.

Simply on Your Side.

Just call **1-855-7-MYPATH**
(1-855-769-7284) to talk to a nurse or HARVONI specialist.

HARVONI is a prescription medicine used to treat chronic (lasting a long time) hepatitis C genotype 1 infection in adults. It is not known if HARVONI is safe and effective in children under 18 years of age.

Important Safety Information

What should I tell my healthcare provider before taking HARVONI?

- If you have: liver problems other than hepatitis C infection; severe kidney problems or are on dialysis; any other medical condition; or if you are pregnant or breastfeeding or plan to become pregnant or breastfeed. It is not known if HARVONI will harm your unborn baby or pass into your breast milk.
- If you take amiodarone (Cordarone®, Nexterone®, Pacerone®), rifampin (Rifadin®, Rifamate®, Rifater®), St. John's wort or a product that contains St. John's wort. Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. HARVONI may affect the way other medicines work, and other medicines may affect how HARVONI works.

You should not take HARVONI if you also take other medicines that contain sofosbuvir (SOVALDI®).

What are the most common side effects of HARVONI?

Common side effects include tiredness and headache.
