Subject: [name], have you taken the next step?

NO PRIOR TREATMENT?

With just 12 weeks of therapy,
you or someone you care about could
move on from **chronic hepatitis C**
(genotype 1).*

It's true.

HARVONI is the one and only treatment that's **one pill, once a day for 12 weeks**. That means the sooner you talk to your hepatitis C (Hep C) specialist, the sooner you can find out if HARVONI is right for you.

HARVONI, a prescription medicine containing ledipasvir and sofosbuvir, is used to treat chronic (lasting a long time) hep C genotype 1 infection in adults. It is not known if HARVONI is safe and effective in children under 18 years of age.

A proven cure.

HARVONI has been proven to cure 96–99% of patients who've had no prior Hep C treatment with 12 weeks of therapy.* **Cure means the Hep C virus is not detected in the blood when measured three months after treatment is completed.**

A simple regimen.

With HARVONI, there's **no interferon, no ribavirin, and no complicated treatment regimens.**

Important Safety Information

What should I tell my healthcare provider before taking HARVONI?

- If you have: liver problems other than hepatitis C infection; severe kidney problems or are on dialysis; any other medical condition; or if you are pregnant or breastfeeding or plan to become pregnant or breastfeed. It is not known if HARVONI will harm your unborn baby or pass into your breast milk.
- If you take amiodarone (Cordarone®, Nexterone®, Pacerone®), rifampin (Rifadin®, Rifamate®, Rifater®), St. John's wort or a product that contains St. John's wort. Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. HARVONI may affect the way other medicines work, and other medicines may affect how HARVONI works.

You should not take HARVONI if you also take other medicines that contain sofosbuvir (SOVALDI®).

What are the most common side effects of HARVONI?

Common side effects include tiredness and headache.

*In a study of 865 patients with genotype 1 Hep C and no prior Hep C treatment, with or without advanced liver disease (cirrhosis), 99% (210 out of 213) of those who received HARVONI once daily for 12 weeks were cured. In a separate study of 647 patients with genotype 1 Hep C, with no prior Hep C treatment and without cirrhosis, 96% (208 out of 216) of those who received HARVONI once daily for 12 weeks were cured.

“Hepatitis C is not hanging over my head anymore. It's really an awesome feeling.”
