Subject: [First name], you're near an important milestone!

# You're right on track

## Keep taking steps toward your goal

In clinical studies, **96–99%** of adult patients who've had **no prior Hep C treatment** were cured with just **12 weeks** of HARVONI therapy.\* As you work toward your goal of putting hepatitis C (Hep C) behind you, remember to celebrate every milestone. After you've been on treatment with HARVONI for a few weeks, one of the key milestones you may reach is being asked to take a simple blood test. This test will give your Hep C specialist a chance to see the level of Hep C virus in your bloodstream, so he or she can help you keep moving toward your goal.

\*In a study of 865 patients with genotype 1 Hep C and no prior Hep C treatment, with or without advanced liver disease (cirrhosis), 99% (210 out of 213) of those who received HARVONI once daily for 12 weeks were cured. In a separate study of 647 patients with genotype 1 Hep C, with no prior Hep C treatment and without cirrhosis, 96% (208 out of 216) of those who received HARVONI once daily for 12 weeks were cured.

## Let your healthcare team be your partner along the way

As you progress through treatment with HARVONI, stay open and honest with your healthcare team. Talk to your Hep C specialist any time you have questions. And make notes about how you feel, so at your next appointment you can share information about your health and get the answers you need. A strong partnership with your Hep C specialist may help you overcome hurdles as you move toward your goal.

## Tips to help manage common side effects

Have you been experiencing any tiredness or headache? These were the most common side effects seen in clinical trials with HARVONI. The following tips may help you keep on track.

### Tips for tiredness

- Do your hardest chores when you have the most energy.
- Take short naps — 20 minutes or less — and not close to bedtime.

### Tips for headache

- Drink water. Limit coffee, tea, and soda with caffeine.
- Avoid bright lights, loud noises, and bad smells.

These are not all the possible side effects of HARVONI. Be sure to tell your healthcare provider if you have any side effect that bothers you or does not go away. For more information, ask your healthcare provider or pharmacist.

HARVONI is a prescription medicine used to treat chronic (lasting a long time) hepatitis C genotype 1 infection in adults. It is not known if HARVONI is safe and effective in children under 18 years of age.

## Important Safety Information

### What should I tell my healthcare provider before taking HARVONI?

- If you have: liver problems other than hepatitis C infection; severe kidney problems or are on dialysis; any other medical condition; or if you are pregnant or breastfeeding or plan to become pregnant or breastfeed. It is not known if HARVONI will harm your unborn baby or pass into your breast milk.
- If you take amiodarone (Cordarone®, Nexterone®, Pacerone®), rifampin (Rifadin®, Rifamate®, Rifater®), St. John's wort or a product that contains St. John's wort. Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. HARVONI may affect the way other medicines work, and other medicines may affect how HARVONI works.

**You should not take HARVONI if you also take** other medicines that contain sofosbuvir (SOVALDI®).

### What are the most common side effects of HARVONI?

Common side effects include tiredness and headache.
