

Dear [Name],

Life with hepatitis C (Hep C) can be filled with questions and concerns about what the virus may be doing to your liver over time. It doesn't have to be this way. If you've ever wondered about whether or not you should seek treatment, talking to a Hep C specialist about a revolutionary treatment like HARVONI can help.

HARVONI is a prescription medicine for chronic (lasting a long time) Hep C genotype 1 in adults that combines two drugs (ledipasvir and sofosbuvir). It is not known if HARVONI is safe and effective in children under 18 years of age.

What could HARVONI mean for you or someone you care about?

- HARVONI treatment is **one pill, once a day**. It's that simple.
- HARVONI has been **proven to cure 96-99% of adult patients** who've had no prior Hep C treatment with 12 weeks of therapy.*
- With HARVONI, there's **no interferon, no ribavirin, and no complicated treatment regimens**.

*In a study of 865 patients with genotype 1 Hep C and no prior Hep C treatment, with or without advanced liver disease (cirrhosis), 99% (210 out of 213) of those who received HARVONI once daily for 12 weeks were cured. In a separate study of 647 patients with genotype 1 Hep C, with no prior Hep C treatment and without cirrhosis, 96% (208 out of 216) of those who received HARVONI once daily for 12 weeks were cured.

How will you know if you're cured? You'll know when the Hep C virus can **no longer be detected** in your blood when measured three months after you've finished your treatment.

What should I tell my healthcare provider before taking HARVONI?

- If you have: liver problems other than hepatitis C infection; severe kidney problems or are on dialysis; any other medical condition; or if you are pregnant or breastfeeding or plan to become pregnant or breastfeed. It is not known if HARVONI will harm your unborn baby or pass into your breast milk.
-
- If you take amiodarone (Cordarone®, Nexterone®, Pacerone®), rifampin (Rifadin®, Rifamate®, Rifater®), St. John's wort or a product that contains St. John's wort. Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. HARVONI may affect the way other medicines work, and other medicines may affect how HARVONI works.

You should not take HARVONI if you also take other medicines that contain sofosbuvir (SOVALDI®).

What are the most common side effects of HARVONI?

Common side effects include tiredness and headache.

Now may be the time to talk to your Hep C specialist.

Only your Hep C specialist can decide if HARVONI is right for you. Take the first step by making an appointment today and learn more at HARVONI.com.

Sincerely,
Your HARVONI Team

P.S. Look for questions to ask your Hep C specialist in the enclosed brochure and bring them to your next appointment.

Please see full Prescribing Information, including Patient Information, attached to the enclosed brochure.

**"From my perspective and experience, the Gilead
drug was a breakthrough."** – Jon, Fallbrook, CA, HARVONI patient
